

Vladislav Medyansky

vlad.medyansky@outlook.com | +995551231196 | telegram: @nonezerone | [linkedin](#) | Tbilisi, Georgia

Back-end developer with 4 years of experience focused on building primarily with Ruby on Rails. I am willing to work on meaningful and impactful projects, committed to writing maintainable code and delivering user-focused solutions.

Experience:**Full-stack Developer**, [e-broker.ai](#)

December 2021 - Present

Responsibilities:

- Maintaining and developing new features for a legacy Ruby on Rails project
- Refactoring and rewriting core services and an entire project structure
- Upgrading Ruby and Rails to the newest possible versions
- Maintaining and rewriting legacy frontend parts of the system that rely on AngularJS & jQuery
- Maintaining and optimizing existing continuous integration configuration using CircleCI
- Code review
- Team work

Achievements:

- Implemented an e-commerce and subscription system for the platform using Stripe API
- Improved in-system user registration by extending validation for legal entities
 - Validating legal entity ID with the help of Luhn-algorithm
 - Preventing the inclusion of invalid data and standardizing data in the database
- Completed integration with an AI service that analyzes and summarizes digital documents
- Implemented service which generates PDF documents from entities in database using PrawnPDF
- Worked on a notification service improvement
 - Transitioned all existing jobs to Sidekiq jobs
 - Made an improvement by executing some of the jobs asynchronously
 - Switched some of the regular cron-jobs to Sidekiq jobs where possible
- Enhanced the CI/CD workflow by making optimization of RSpec testing and extra configuring test workflow containers
- Wrapped up existing monolith in Docker containers for local development and testing with the help of Docker Compose

Junior Back-end Developer, WunderKinder

June 2021 - December 2021

Responsibilities:

- Implementing and maintaining backend and frontend parts of an e-shop using Ruby on Rails
- Implementing e-commerce in the system
- Designing and implementing blogging part of the e-shop

Achievements:

- Implemented blogpost service with tag system and search
- Got my hands on implementing an admin panel using Devise
- Created and managed product categories
- Participated in setting up and configuring continuous integration using Github Actions
